

The sentence “Querying neo4j “ these should not be shown to the end user.

When submitting the answers, the user should be questioned that “Do you want to submit the answer or you want to change it ?” something like that the user should be allowed to review the answer one last time before submitting it. The scenario i am talking is that if user is over confident and while evaluating the answer he/she realises it is wrong or i want to modify it that should be avoided.

The sentence “Connecting to backend” these statements should not be given seen by the user.

After the interview session is over, the data in both the DB (neo4j and Qdrant should be deleted and the connection should be closed.

Future Plan of action -

- 1) Show a dialog box or a field to user which allows the user to paste its own LLM key.
- 2) Implement the TTS and STT (V2).
- 3) To Implement on which answers the LLM can;t respond well. (Basically to apply query optimization Techniques)
- 4) For now it is just stuck to chatgpt, later down the line the structures will be adaptable to multiple llm's
